INTRODUCTION

ChadOps is an innovative project that merges meme culture, decentralized finance, and community-driven investment. Through its ecosystem, ChadOps aims to empower NFT traders and investors who have experienced the market's turbulence. By combining a meme coin, the \$CHOPS Token, and an NFT collection functioning as a community hedge fund, ChadOps creates a unique approach where the community is at the heart of decision-making and benefits.

The project is built on two pillars :

- ➔ \$CHOPS, our digital asset that will serve as the foundation of our project. A buffer value that will play a central role in supporting our partners, rewarding our holders, or simply acting as leverage for any initiatives aimed at improving our project.
- ➔ An NFT collection acting as a community hedge fund, where holders participate in collective management and investments.

CHALLENGES IN THE CRYPTO MARKET

The NFT and crypto market is an extremely volatile environment where monitoring the market in real-time across various segments—NFTs, memes, altcoins, and major cryptocurrencies—presents a significant challenge. Additionally, a solo actor in this space faces an overwhelming number of obstacles :

the sheer amount of time required to track and analyze trends, the difficulty in acquiring trustworthy and actionable information, and the necessity of deep market knowledge across multiple evolving sectors such as NFTs, memes, altcoins, and major cryptocurrencies.

Each blockchain ecosystem introduces its own complexities, demanding a complete understanding of new environments.

A striking example is Bitcoin and its Ordinals, which require a significant adaptation challenge, acting as a barrier for many.

Keeping pace with the rapid developments in DeFi and emerging protocols adds another layer of complexity, making it nearly impossible to stay consistently updated.

Furthermore, the reliability of project leaders and the credibility of available data can be highly uncertain, making decision-making even riskier.

Without collective intelligence and shared insights, a single trader is left to navigate an unpredictable and ever-shifting landscape alone, often leading to missed opportunities and increased exposure to market pitfalls.

CHADOPS SOLUTION

The only viable solution to the challenges outlined in Section II is the power of the group. A collective force, always awake, vigilant, and constantly evolving with one objective: to ensure the prosperity of its members. This is the foundation of our community-driven hedge fund—a groundbreaking idea that redefines how decentralized investment should function.

At the core of our hedge fund is a structured, multi-layered governance model:

The Core Team:

Responsible for ensuring coherent fund management and securing assets through multi-signature wallets, prioritizing transparency and safety.

Recognized Experts (Vassals):

Specialists in specific fields who will lead initiatives within their respective domains, ensuring that each sector of our fund operates with expertise and strategic oversight.

Our hedge fund is multi-asset and multi-blockchain. We aim to operate wherever the best opportunities arise, adapting dynamically to the evolving crypto landscape.

The Heart of the Colony: the Community

Your role is the most crucial: to be both a judge and a participant. Through intuitive management tools we will develop, you will be at the forefront—validating fund initiatives or even proposing new opportunities we might have overlooked.

However, this is not about navigating a sluggish, bureaucratic governance system. We prioritize agility. Our tools will strike a balance between speed and caution, ensuring fast decision-making without recklessness.

Depending on the type of asset and the size of the investment within the fund, we will present a structured proposal with a voting window and a minimum approval threshold to validate the decision. Further details on this governance structure will be provided in an annexed document.

Liquid and Accessible Investment

Each ChadOps NFT is directly tied to a share of the hedge fund, also receiving a bonus allocation in CHOPS.

Holders will have the ability to sell their share back to the fund within predefined timeframes, ensuring constant liquidity at real market prices.

This mechanism maintains the financial health of our collection while ensuring fair valuation. But beyond its intrinsic financial value, an NFT from our collection represents something greater : exclusive access to a high-quality private group. And believe us, that access will be highly sought after!

Why ChadOps Stands Out ?

By joining ChadOps, you gain a unique opportunity to become part of an experienced group that operates day and night, everywhere, all the time. Through an initial investment, not only does your capital work for you, but you also gain access to a learning environment where you can refine your skills and become a better investor. More importantly, your voice will finally carry real weight in a decentralized ecosystem where governance matters.

TOKENOMICS

\$CHOPS Token

Total supply : 1,000,000,000

Distribution :

Team Allocation : ~16%

NFT Projets Allocation : ~24%

Future Developments & Costs : ~10%

Initial Coin Offering (ICO) : ~17%

Liquidity Pool (LP) : ~33%

ChadOps NFT Collection

Total supply : 500

Price: TBD (SOLS + CHOPS)

Future Developments & Costs: ~10-20%

IDEAL FUND ALLOCATION

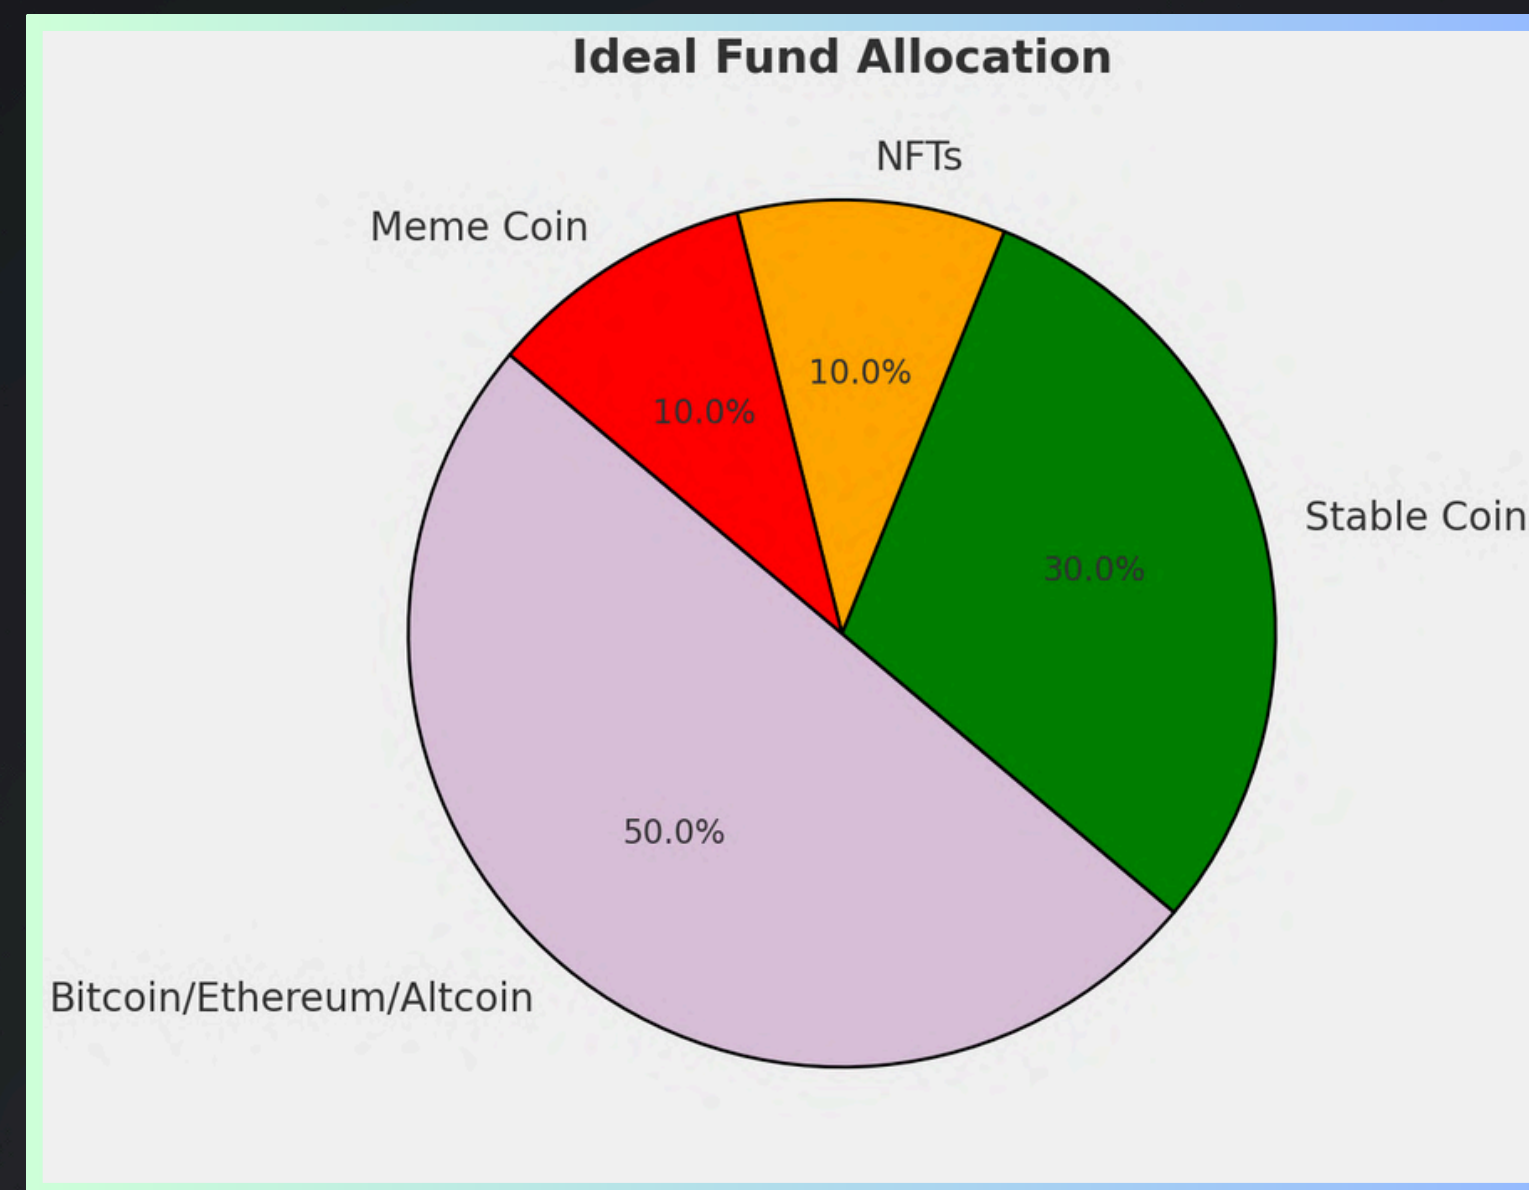

A well-structured fund allocation is key to balancing risk, liquidity, and long-term growth. Our proposed allocation strategy aims to create an optimal balance between stability and high-growth opportunities

50% Bitcoin/Ethereum/Altcoins – A strong foundation in major cryptocurrencies ensures long-term stability while allowing exposure to promising altcoins.

30% Stablecoins – Provides liquidity and security, allowing the fund to react quickly to new opportunities and market fluctuations.

10% NFTs – Strategic exposure to high-value digital assets, acknowledging both their cultural significance and potential for long-term appreciation.

10% Meme Coins – A high-risk, high-reward allocation recognizing the speculative nature of meme coins while leveraging community-driven movements.

Yield Strategies Within This Allocation

To maximize the efficiency of our allocation, strategic yield farming mechanisms will be implemented. These will allow the fund to generate passive income and compound its growth over time.

Stablecoins will be allocated to reliable DeFi protocols to earn sustainable yields, while Bitcoin, Ethereum, and select altcoins will be staked or deployed in liquidity pools where appropriate.

This ensures that while part of the fund remains liquid, a percentage continues to work and generate returns.

Strengths of This Allocation

- ✓ **Balanced Exposure** – Major cryptos form the backbone, while stablecoins provide liquidity, and NFTs/meme coins offer speculative upside.
- ✓ **Liquidity & Stability** – A strong portion in stablecoins allows flexibility and quick deployment into market opportunities.
- ✓ **Diversification** – Exposure across multiple asset classes ensures risk mitigation and adaptability in evolving market conditions.

CONCLUSION

ChadOps is not just another crypto project; it is a community-driven financial revolution.

Through strategic fund allocation, collective intelligence, and cutting-edge investment strategies, ChadOps positions itself as a pioneering force in decentralized finance.

Our multi-asset, multi-blockchain approach ensures that we are always operating where the best opportunities exist, leveraging the power of our community to make informed, strategic decisions.

Whether it's through yield farming, governance-backed fund management, or strategic asset allocation, every participant has a direct role in shaping the fund's future and maximizing returns.

By joining ChadOps, you are not just making an investment; you are becoming part of an elite network of traders, investors, and visionaries dedicated to innovation, growth, and financial empowerment.

The future of decentralized finance is in your hands. Be part of the movement.
